Professional Experience

Frontend Engineer & Designer | *City of Los Angeles, Department of Parks and Recreation*   Sep 2019 - Present
- Discuss site proposals with department heads to gather detailed design requirements and suggest improvements.
- Work with designers to transform website wireframes into highly usable user interfaces/experiences (UI/UX).
- Lead multiple projects to completion while standardizing output to have a responsive and mobile-first approach.
- Troubleshoot bugs and update web content on multiple high-volume sites receiving over 150,000 monthly visits.
- Analyze legacy code and utilize modern web strategies to create more maintainable, readable, and scalable code.

WordPress Developer & Designer | *K'dara CBD*   Oct 2020 - Jan 2021
- Collaborated with the CEO to give the company eCommerce website a complete rebrand and structural overhaul.
- Implemented WordPress plugins for caching and image optimization, increasing website performance by 20%.
- Devised complex solutions for managing technical integration with third party services (WooCommerce, JustUno).
- Managed marketing campaigns and took charge of adding new products while fulfilling multiple strict deadlines.
- Customized WordPress theme and developed new features to advertise products and services more effectively.

Full Stack Web Development Assistant Instructor | *Trilogy Education Services*   Dec 2018 - Aug 2019
- Provided instructional support for 25 students, mentoring individually to aid in topics requiring improvement.
- Hosted daily scrum meetings with students to help them practice agile methodologies and team collaboration.
- Reviewed code assignments, provided instructional material, and maintained the GitLab class repository.

Web Applications

Foodie Blog - MERN Stack App | 🌐 bit.ly/FoodieBlog-App bit.ly/FoodieBlog-GH
A full stack blogging application complete with a responsive and highly usable interface, and file upload capabilities.
- Tech Stack: MongoDB, Express, React, Hooks, Node, axios, multer, GridFS, mongoose, morgan, react router
- Took advantage of React Hooks and axios to manage form data and API requests handled in backend server files.
- Deployed reusable React components used to display user-facing data on homepage and individual post pages.
- Utilized git to manage and track changes being made to project files during app development.
- Meticulously applied troubleshooting strategies and resolved 100% of bugs before deployment.

The Legend Of Marceline | 🌐 bit.ly/LOM-App bit.ly/LOM-GH
A fully customized, modern, and responsive website architected using advanced CSS and Sass techniques.
- Tech Stack: HTML, CSS, Sass, Node.js, npm
- Created and incorporated a custom CSS grid system, along with CSS media queries for mobile responsiveness.
- Assembled maintainable and scalable Sass components for use throughout the web application.
- Pushed CSS and Sass to its fullest capacity, implementing features that typically require JavaScript to function.
